Professional Summary

Results-driven Computer Science undergraduate at Vellore Institute of Technology with strong expertise in full-stack development and backend engineering. Proficient in Node.js, Express.js, React, and system design, with hands-on experience building scalable, secure applications using modern technologies and microservices architecture. Demonstrates strong problem-solving, clean coding practices, and collaborative development skills, with a focus on delivering efficient and user-centric solutions.

Education

Vellore Institute of Technology

Percentage 85%

Skills

Languages: Java, Python, C++, JavaScript, SQL

Frameworks: Node.js, Express.js, React.js, JSX, HTML, CSS, JavaScript, JDBC, REST APIs, MySQL, PostgreSQL, MongoDB

Tools: postman, Docker, Git, GitHub, Heroku, Render, VS Code, IntelliJ IDEA, Eclipse, AWS

Professional: Problem Solving, Algorithmic Thinking, Clean Code, Modular Design, Version Control, Team Collaboration, Agile Methodologies, Debugging, Testing, Deployment, CI/CD Basics

Projects

Code-O-Share ([GitHub](#)) / ([live link](#))

- Real-time collaborative code editor with live code synchronization, chat, authentication, MongoDB-based code storage, and Docker-powered multi-language code execution using Judge0 with room-based collaboration and real-time cursor tracking.
- Technologies & Tools:
Frontend: React, Vite, Monaco Editor, Axios, React Router DOM, Socket.IO Client, React Hot Toast
Backend: Node.js, Express.js, Socket.IO, JWT, bcryptjs
Database: MongoDB, Mongoose, PostgreSQL, Redis
Code Execution & Deployment: Docker, Judge0, Vercel

NexMeet ([github](#)) | ([live link](#))

- NexMeet is a full-stack real-time video conferencing application with secure authentication, video/audio calling, screen sharing, and chat.
- Technologies Used:
Frontend: React, Html, CSS, JavaScript,
Backend: Express, Node
Database: MongoDB
APIs & Tools: REST APIs, Git & GitHub, WebRTC, Socket.IO, JWT

Swastha-Mitra ([GitHub](#)) | ([live link](#))

- Swastha Mitra is a full-stack health-tech web application that provides disease prediction based on symptoms, medical guidance, real-time doctor consultation via video calling, and location-based hospital discovery, enhancing accessibility to healthcare services.
- Technologies Used:
Frontend: React, Html, CSS, JavaScript,
Backend: Spring boot, Spring boot security
Database: MySQL (via JDBC)
APIs & Tools: Web Speech API (voice input), Maps API (hospital locator), REST APIs, Git & GitHub
Machine Learning: Python (Flask / FastAPI microservice)

Achievements

- Solved 700+ questions on LeetCode and other platforms
- LeetCode Contest Rating 1586(max)
- NPTEL Elite badge
